

## Lab Assignment 3: CS2233

August 28, 2023

### Question:

Write a C program to construct the following binary tree.

Each node of the tree should use the following **struct** data type:

```
struct node
{
int data;
struct node *left;
struct node *right;
};
```

Also, write the functions for **preorder**, **inorder** and **post-order** traversals. Each function should take only the pointer to the root node as input and should perform the traversal. Print the corresponding traversal for the above tree.
